

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): A method for accepting and processing an application for conformity of a supplier dictionary to a standard dictionary using a computer system, said standard dictionary, which is used for an electronic catalog of a component, having a classification hierarchy ~~eonsisted comprised~~ of a component class related to a tree structure and a property of the component class, said method comprising:

receiving application data for said application transmitted from said supplier in respect to said supplier dictionary, the application data including information as to whether or not the supplier dictionary is intended for open to public, a conformity level, and a license level;

determining whether or not said supplier dictionary is intended for open to public with reference to said application data;

determining charge level according to the conformity level and the license level included in said application data if the supplier dictionary is intended for open to public;

transmitting data indicating the determined charge level to said supplier; and

~~transmitting a verification program to said supplier in order to verify, at the side of said supplier, the conformity at the conformity level indicated in said application data;~~

~~transmitting said standard dictionary to said supplier; and~~

charging said supplier in accordance with said determined charge level.

Claim 2 (Currently Amended): The method of claim [[1]] 18, wherein if said supplier dictionary is not intended for open to public, the verification program for verifying the conformity at the conformity level indicated in the application data is transmitted to the supplier without charging the supplier.

Claim 3 (Original): The method of claim 1, further comprising:
issuing a supplier code for identifying said supplier, the supplier code being related to
said application data.

Claim 4 (Original): The method of claim 1, further comprising:
storing data regarding the supplier while associating the data with the issued supplier
code.

Claim 5 (Original): The method of claim 1, wherein said conformity level includes:
a first conformity level in which the supplier dictionary is in conformity with the standard
dictionary regarding terms, but out of conformity regarding the classification hierarchy and the
property;
a second conformity level in which the supplier dictionary is in conformity with the
standard dictionary regarding an object of the component, but out of conformity regarding the
classification hierarchy;
a third conformity level in which the supplier dictionary is in conformity with the
standard dictionary regarding a part of the classification hierarchy, but out of conformity
regarding the property;
a fourth conformity level in which the supplier dictionary is in conformity with the
standard dictionary regarding a part of the classification hierarchy and the property thereof;
a fifth conformity level in which the supplier dictionary is in conformity with the
standard dictionary regarding the entire classification hierarchy, but out of conformity regarding
the property; and
a sixth conformity level in which the supplier dictionary is in conformity with the
standard dictionary regarding the entire classification hierarchy and the property thereof.

Claim 6 (Currently Amended): The method of claim 1, wherein said license level includes:

a first license level in which the standard dictionary is used as it is;
a second license level in which a new candidate of value can be added to the property;
a third license level in which a new property can be added to the component class;
a fourth license level in which a new component class can be added to [[an]] a lowermost layer of the classification hierarchy; and
a fifth license level in which a new component class can be added to any layer of the classification hierarchy.

Claim 7 (Currently Amended): The method of claim [[1]] 18, wherein said verification program compares the definition of the supplier dictionary with the definition of the standard dictionary based on the given conformity level, and determines whether or not the conformity level is kept according to the obtained result of comparison.

Claim 8 (Currently Amended): A computer system configured to accept and ~~processes~~ process an application for conformity of a supplier dictionary to a standard dictionary using a computer system, said standard dictionary, which is used for an electronic catalog of a component, having a classification hierarchy ~~consisted~~ comprised of a component class related to a tree structure and a property of the component class, said system comprising:

a receiver connected to a network, configured to receive application data for said application transmitted via the network from said supplier in respect to said supplier dictionary, the application data including information as to whether or not the supplier dictionary is intended for open to public, a conformity level, and a license level;

a first determination device configured to determine whether or not said supplier dictionary is intended for open to public with respect to said application data;

a second determination device configured to determine charge level according to the conformity level and the license level included in said application data if the supplier dictionary is intended for open to public;

a first transmitter configured to transmit data indicating the determined charge level to said supplier; and

~~a second transmitter configured to transmit a verification program to said supplier in order to verify, at the side of said supplier, the conformity at the conformity level indicated in said application data;~~

~~a third transmitter configured to transmit said standard dictionary to said supplier;~~

a charge processing device configured to charge said supplier in accordance with said determined charge level.

Claim 9 (Currently Amended): The system of claim [[8]] 19, wherein if said supplier dictionary is not intended for open to public, the verification program for verifying the conformity at the conformity level indicated in the application data is transmitted to the supplier without charging the supplier.

Claim 10 (Original): The system of claim 8, further comprising:

a code issuing device configured to issue a supplier code for identifying said supplier, the supplier code being related to said application data.

Claim 11 (Original): The system of claim 10, further comprising:

a supplier information storing device configured to store data regarding the supplier while associating the data with the issued supplier code.

Claim 12 (Original): The system of claim 8, wherein said conformity level includes:

- a first conformity level in which the supplier dictionary is in conformity with the standard dictionary regarding terms, but out of conformity regarding the classification hierarchy and the property;
- a second conformity level in which the supplier dictionary is in conformity with the standard dictionary regarding an object of the component, but out of conformity regarding the classification hierarchy;
- a third conformity level in which the supplier dictionary is in conformity with the standard dictionary regarding a part of the classification hierarchy, but out of conformity regarding the property;
- a fourth conformity level in which the supplier dictionary is in conformity with the standard dictionary regarding a part of the classification hierarchy and the property thereof;
- a fifth conformity level in which the supplier dictionary is in conformity with the standard dictionary regarding the entire classification hierarchy, but out of conformity regarding the property; and
- a sixth conformity level in which the supplier dictionary is in conformity with the standard dictionary regarding the entire classification hierarchy and the property thereof.

Claim 13 (Currently Amended): The system of claim 8, wherein said license level includes:

- a first license level in which the standard dictionary is used as it is;
- a second license level in which a new candidate of value can be added to the property;

a third license level in which a new property can be added to the component class;

a fourth license level in which a new component class can be added to [[an]] a lowermost layer of the classification hierarchy; and

a fifth license level in which a new component class can be added to any layer of the classification hierarchy.

Claim 14 (Currently Amended): The system of claim [[8]] 19, wherein said verification program compares the definition of the supplier dictionary with the definition of the standard dictionary based on the given conformity level, and determines whether or not the conformity level is kept according to the obtained result of comparison.

Claim 15 (Currently Amended): A recording medium stored thereon a computer readable program for enabling a computer to accept and processes process an application for conformity of a supplier dictionary to a standard dictionary using a computer system, said standard dictionary, which is used for an electronic catalog of a component, having a classification hierarchy eonsisted comprised of a component class related to a tree structure and a property of the component class, said program comprising:

a first program code enabling the computer to receive application data for said application transmitted via a network from said supplier in respect to said supplier dictionary, the application data including information as to whether or not the supplier dictionary is intended for open to public, a conformity level, and a license level;

a second program code enabling the computer to determine whether or not said supplier dictionary is intended for open to public with respect to said application data;

a third program code enabling the computer to determine charge level according to the conformity level and the license level included in said application data if the supplier dictionary is intended for open to public;

~~a fourth program code enabling the computer to transmit said standard dictionary to said supplier;~~

a fifth program code enabling the computer to transmit data indicating the determined charge level to said supplier; and

~~a sixth program code enabling the computer to transmit a verification program to said supplier in order to verify, at the side of said supplier, the conformity at the conformity level indicated in said application data; and~~

~~a seventh sixth~~ program code enabling the computer to charge said supplier in accordance with said determined charge level.

Claim 16 (Currently Amended): The method of claim 1, wherein said conformity level includes:

a first conformity level in which all of class terms in the supplier dictionary are derived from the standard dictionary;

a second conformity level in which some of class terms in the supplier dictionary are derived from standard dictionary, but others in the supplier dictionary are defined as locally;

a third conformity level in which all of class definitions in the supplier dictionary are derived from the standard dictionary;

a fourth conformity level in which some of class definitions in the supplier dictionary are derived from the standard dictionary, but others in the supplier dictionary are defined as locally;

- a fifth conformity level in which all of class terms in the supplier dictionary are derived from the standard dictionary, and the classification hierarchy of the supplier dictionary is a part of classification hierarchy of the standard dictionary;
- a sixth conformity level in which some of class terms are in the supplier dictionary are derived from standard dictionary, but others in the supplier dictionary are defined as locally, and a part of the classification hierarchy of the supplier dictionary is a part of classification hierarchy of the standard dictionary;
- a seventh conformity level in which all of class definitions in the supplier dictionary are derived from the standard dictionary, and the classification hierarchy of the supplier dictionary is a part of classification hierarchy of the standard dictionary;
- an eighth conformity level in which some of class definitions in the supplier dictionary are derived from the standard dictionary, but others in the supplier dictionary are defined as locally, and a part of the classification hierarchy of the supplier dictionary is a part of classification hierarchy of the standard dictionary;
- a ninth conformity level in which all of class terms in the supplier dictionary are derived from the standard dictionary, and the classification hierarchy of the supplier dictionary is equal to the classification hierarchy of the standard dictionary;
- a tenth conformity level in which all of class terms of the standard dictionary are included in the supplier dictionary, and local class terms are exist, and the classification hierarchy of the standard dictionary is a part of classification hierarchy of the supplier dictionary;
- an eleventh conformity level in which the supplier dictionary is equal to the standard dictionary; and
- a twelfth conformity level in which the standard dictionary are included in the supplier dictionary, and local class definitions [[are]] exist.

Claim 17 (Previously Presented): The system of claim 8, wherein said conformity level includes:

- a first conformity level in which all of class terms in the supplier dictionary are derived from the standard dictionary;
- a second conformity level in which some of class terms in the supplier dictionary are derived from standard dictionary, but others in the supplier dictionary are defined as locally;
- a third conformity level in which all of class definitions in the supplier dictionary are derived from the standard dictionary;
- a fourth conformity level in which some of class definitions in the supplier dictionary are derived from the standard dictionary, but others in the supplier dictionary are defined as locally;
- a fifth conformity level in which all of class terms in the supplier dictionary are derived from the standard dictionary, and the classification hierarchy of the supplier dictionary is a part of classification hierarchy of the standard dictionary;
- a sixth conformity level in which some of class terms are in the supplier dictionary are derived from standard dictionary, but others in the supplier dictionary are defined as locally, and a part of the classification hierarchy of the supplier dictionary is a part of classification hierarchy of the standard dictionary;
- a seventh conformity level in which all of class definitions in the supplier dictionary are derived from the standard dictionary, and the classification hierarchy of the supplier dictionary is a part of classification hierarchy of the standard dictionary;
- an eighth conformity level in which some of class definitions in the supplier dictionary are derived from the standard dictionary, but others in the supplier dictionary are defined as locally, and a part of the classification hierarchy of the supplier dictionary is a part of classification hierarchy of the standard dictionary;

a ninth conformity level in which all of class terms in the supplier dictionary are derived from the standard dictionary, and the classification hierarchy of the supplier dictionary is equal to the classification hierarchy of the standard dictionary;

a tenth conformity level in which all of class terms of the standard dictionary are included in the supplier dictionary, and local class terms are exist, and the classification hierarchy of the standard dictionary is a part of classification hierarchy of the supplier dictionary;

an eleventh conformity level in which the supplier dictionary is equal to the standard dictionary; and

a twelfth conformity level in which the standard dictionary are included in the supplier dictionary, and local class definitions [[are]] exist.

Claim 18 (New): The method of claim 1, further comprising:

transmitting a verification program to said supplier in order to verify, at the side of said supplier, the conformity at the conformity level indicated in said application data; and

transmitting said standard dictionary to said supplier.

Claim 19 (New): The system of claim 8, further comprising:

a second transmitter configured to transmit a verification program to said supplier in order to verify, at the side of said supplier, the conformity at the conformity level indicated in said application data; and

a third transmitter configured to transmit said standard dictionary to said supplier.

Claim 20 (New): The medium of claim 15, further comprising:

a seventh program code enabling the computer to transmit a verification

Application No. 09/910,848
Reply to Notice of Allowance of March 31, 2005

program to said supplier in order to verify, at the side of said supplier, the conformity at the
conformity level indicated in said application data; and

an eighth program code enabling the computer to transmit said standard dictionary to said
supplier.
